EDUCATION

University of Southern California

Master of Science in Computer Science

Los Angeles, CA

Aug. 2025 – Dec 2027

University of California, Santa Cruz

Bachelor of Science in Computer Science

Santa Cruz, CA

Sept. 2021 – May 2025

TECHNICAL SKILLS

Languages: Python, Java, C/C++, JavaScript, TypeScript, SQL, Kotlin, Swift

Frameworks: React, Node.js, Express.js, Flask, AngularJS, SwiftUI, Jetpack Compose

Cloud/DevOps: Amazon Web Services (AWS), Google Cloud Platform (GCP), Docker, Kubernetes, GitHub Actions, SAML SSO

Databases/Infra: Terraform, PostgreSQL, Firebase, Redis, InfluxDB, Prometheus, Elasticsearch, Kafka, Grafana

EXPERIENCE

Engineering Intern

June 2026 – Present

Tokonoma AI

Redwood City, CA

- Developed and optimized the product's Model Context Protocol (MCP) tools, reducing token usage by 30% on key memory storage and retrieval operations.
- Integrated enterprise identity providers through SSO using Google SAML.
- Added support for Agent level authorization to our server through Okta Enterprise Managed Authorization.
- Extended internal Agent evaluation framework to benchmark tool performance, resource usage, and LLM output quality.
- Created GitHub Actions CI workflow to run integration tests against Starlette/Uvicorn services and PostgreSQL-backed components.

Software Engineering Intern

Jun 2022 – Aug 2022, Jun 2023 – Aug 2023, Jun 2024 – Aug 2024

WideSense Inc.

Berkeley, CA

- Built a full-stack IoT analytics dashboard using AngularJS, Flask, PostgreSQL, and InfluxDB, enabling customers to visualize device telemetry, filter historical trends, and inspect sensor-level performance in real time.
- Wrote unit and integration tests with Jasmine, contributing to over 80% code coverage.
- Designed PostgreSQL schema changes and managed database migrations with Alembic.

Engineering Intern

June 2020 – August 2020, Sept 2021 – May 2022

Pluribus Networks

Santa Clara, CA

- Developed a network traffic replay tool that can capture network traffic and create new scenarios against a virtualized network environment.
- Published through a Kafka pipeline to reproduce issues and benchmark performance, saving the team over 100k USD in network hardware costs.
- Analyzed metrics in Kibana and Grafana using Elasticsearch-backed dashboards.

PROJECTS

Personal Website | *React, TypeScript, Vite, Node.js, GCP, Redis*

- Built a responsive React/TypeScript SPA on Vercel with Spotify playback, history, and recommendations.
- Deployed a Node.js REST API on Cloud Run with OAuth, CORS, and Memorystore Redis caching; TTLs and request coalescing reduced redundant Spotify API traffic.

Loot Me! | *Swift, SwiftUI, Vision, Gemini API, Firebase Auth, Firestore*

- Published a SwiftUI iMessage bill-splitting extension on the App Store with receipt scanning, group tabs, and settlements.
- Built a Vision/Gemini OCR pipeline and real-time Firestore backend with atomic transactions; benchmarked accuracy and latency across 29 receipts.

Hike Review | *React Native, TypeScript, Flask, MySQL, GCP, pytest*

- Built a full-stack hiking application with React Native and Expo, Flask REST APIs, and MySQL; designed the relational schema and wrote pytest tests for reviews, saved hikes, and group outings.
